

5 Food Alerts

Post by Vesta

Sunday, 23 September 2012 22:37

This past week there have been five food alerts. Not necessarily new info, but disturbing evidence seems to be mounting.

1. GM foods have been linked to tumor growth and premature death
2. Arsenic has been found in US rice crops
3. Popcorn can cause "popcorn lung", a condition caused by inhaling diacetyl - an artificial butter flavoring
4. Atlantic ocean fish are disappearing due to environmental pollution
5. Mercury poisoning in tuna found in school lunches

Not good news...oh and add to the list [Trader Joes peanut butter recall](#) .
